EDUCATION

Vishwakarma Institute of Information Technology

B.Tech in Information Technology; CGPA: 9.39/10

Pune, India

Aug 2020 - May 2024

EXPERIENCE

Infineon Technologies

Senior Engineer

Bengaluru, India

October 2025 - Present

- Engineered **Spring Boot microservices** for device tokenization, taking full ownership of the backend lifecycle from REST API design to production deployment.
- Built a local **Model Context Protocol (MCP)** server to give secure LLM access to internal sales codes, reducing manual data retrieval time by **60%**.
- Transitioned monolithic REST APIs to an event-driven architecture using **Apache Kafka**, enabling reliable asynchronous messaging during peak device syncs.
- Optimized high-traffic authentication APIs with a **Redis** distributed cache, decreasing p99 latency by **35%** and reducing **PostgreSQL** database load by **40%**.
- Integrated structured logging and distributed tracing to monitor API health, building custom dashboards that accelerated incident response times.
- Configured automated CI/CD pipelines using **Docker** and **Jenkins**, streamlining the build/deployment process.

Software Developer (Payroll via Girmiti Software)

Jun 2024 - September 2025

- Developed an automated service for personalizing Mastercard payment applications on secure chips, reducing manual provisioning time **from 10 minutes to 5 seconds**.
- Built an **Eclipse-based IDE** for secure element development, implementing **Aardvark I2C** and **SPI** protocols to enable direct communication with smart cards.
- Implemented IDE features for low-level bytecode inspection of **Java applets** and drag-and-drop binary flashing, replacing manual deployment steps.
- Developed a core **Java security library** for RSA key management and digital signatures, now used as the standard authentication layer across multiple microservices.
- Implemented a **multithreaded client tool** (Secure Element Agent) to connect with a test server, enabling remote users to execute tests on chip cards.

Software Development Intern

July 2023 - May 2024

- Created a custom VS Code Debug Adapter bridging **GDB** and **DAP**, enabling seamless step-through debugging across Java and C.
- Developed a **VS Code extension** to read **SFR register** values from a microcontroller for low-level debugging.
- Migrated legacy Ant and Python build scripts to a unified **Maven** setup, reducing compilation times by **20%** and standardizing CI/CD pipelines.

SKILLS

Languages: Java, Golang, C++, Python, SQL

Backend: Spring Boot, Microservices, Kafka, RESTful APIs, WebSockets, OAuth2, JWT

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Jenkins, CI/CD Pipelines, Maven, Gradle, Git

Databases: PostgreSQL, Redis, Database Schema Design, NoSQL

AI & Tools: Model Context Protocol (MCP), RAG, LLM Integration, JUnits, Postman, SonarQube, JIRA

PROJECTS

DockFlow - Self-hosted Distributed CI/CD Platform | *Java, Golang, Docker*

[Source Code](#)

- Engineered a CI/CD platform using a **Spring Boot** orchestrator and **Golang** agents to run isolated **Docker** build pipelines.
- Integrated **WebSockets** for real-time log streaming and designed a **PostgreSQL** schema for pipeline metadata and RBAC.

ACHIEVEMENTS

- Winner – Infineon Innofest'24:** Developed a functional prototype of the European Digital Identity Wallet.
- 1st Place – IoT Hackathon:** Designed and implemented an IoT-based flood detection and prevention system.
- LeetCode Knight:** Solved 1000+ Data Structures and Algorithms problems (Top 2% Globally).
